

"My name is Argyro Philippidou and I am a first year Neuroscience student at the university of Nottingham. One of my aspirations is to contribute in evolving the understanding of the brains' mechanisms as diligently as possible as well as aiding scientific discoveries in this field."

"My name is Maria. I have studied psychology in Germany and Cyprus and I'm currently on my last year of studies for the Master's Degree in Clinical Psychology at the European University of Cyprus. I'm interested in both the research and the psychotherapy field."

"Hello, my name is Maria Kokkinou and I recently got my MSc in Forensic Psychology. My main research interests are, abnormal behaviors, antisocial tendencies and tailoring better therapies for the victims. By joining CAN, my aim is to successfully widen my knowledge in research, abnormal behaviors and to make a positive contribution to my chosen field of study. Given that these antisocial tendencies contribute to behavioral maladaptation, my objective is to underline the need for a multidisciplinary approach that will enable protective agencies, clinical practitioners and law and judicial officers to communicate and coordinate their actions with the welfare of the victims as their paramount objective."

"I am Chrysoula, an international psychology student in Leiden University, Netherlands. I find the human brain extremely fascinating and I love learning about it. I am so excited and happy that I can be part of the process of discovering the brain, contributing to science and progress towards wellbeing!"
